

MANRS

Mutually Agreed Norms for Routing Security

Routing security is vital to the future and stability of the Internet.

Every day dozens of incidents affect the routing system. These incidents are global in scale, with one operator's routing problems cascading to impact others.

#ProtectTheCore

MANRS provides crucial fixes to reduce the most common routing threats, outlining four simple but concrete actions that network operators should take.

Filtering

Prevent propagation of incorrect routing information.

Anti-spoofing

Prevent traffic with spoofed source IP addresses.

Coordination

Facilitate global operational communication and coordination between network operators.

Global Validation

Facilitate validation of routing information on a global scale.
